Insight
Product Overview

Insight is built to meet the diverse needs of modern organisations. Insight is perfect to manage any IT related assets but it can be used for so much more.

The usual suspects like servers, computers, phones etc., can easily be tracked and managed in Insight. The automation framework gives you total control of changes to all your assets.

The graphical explorer enables you to drill down asset dependencies. Dependency mapping and impact analysis has never been easier.

The rich Insight custom fields unleash the integration with JIRA and the JIRA Service Desk Portal. Access related assets and their details directly from your JIRA issue.

Great Visualisation

Assets need references. Who is using what equipment? How is the server equipped? Insight provides detailed dependency graphs.

Automation

Get total control of all changes made to your assets. Automatically create a JIRA issue or run a groovy script if the Java version on your server is getting out of date.
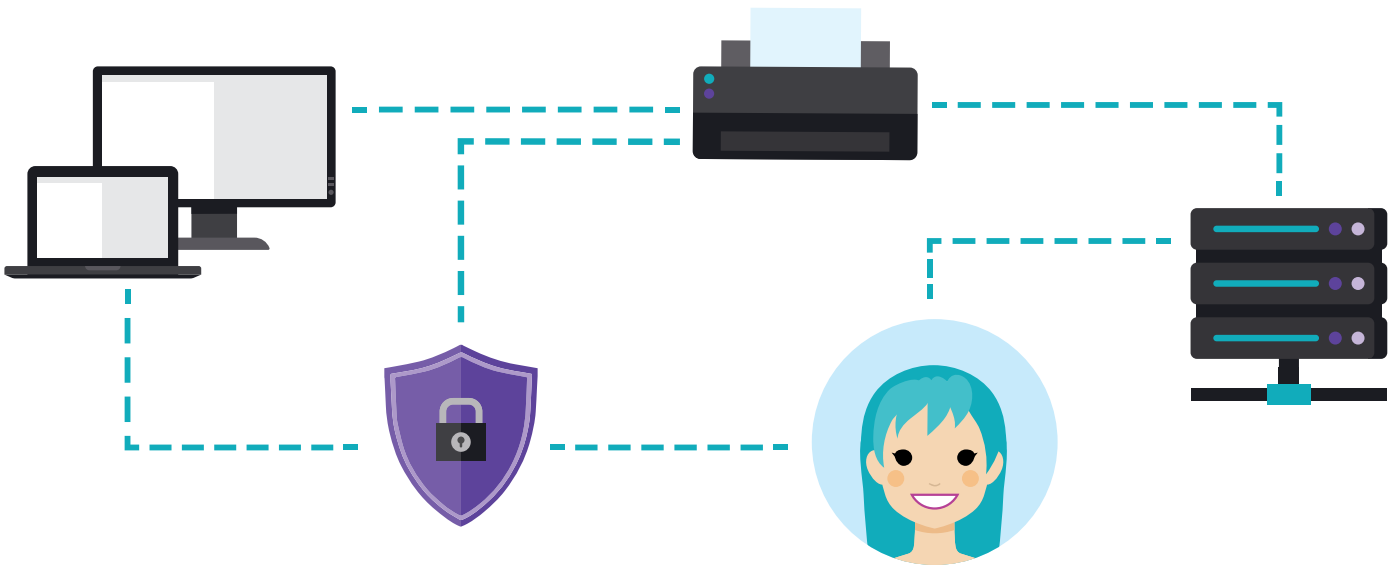

Impact Analysis

What happens if we decommission this asset, how are other services or assets affected? Insight provides detailed impact analysis.

Integrations

Automatic importers get you started with Insight in no time. Need to integrate Insight with other applications? Use the REST and JAVA API to tailor the integrations you need.

Enterprise Asset Management

Regardless of what type of assets you need to manage Insight is the ultimate solution. Insight provide total freedom to create a solution for anything that is important to you. The absolute proximity and connection between your assets and your issues unlocks a state of the art platform for ITSM, CRM, HR and a lot of other business areas.
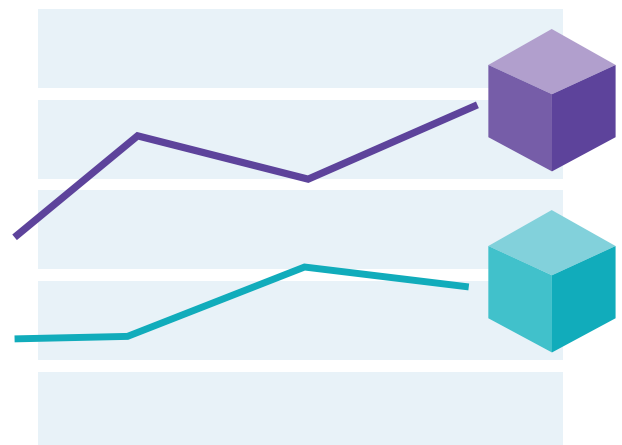

Assets managed in Insight are available on JIRA issues through the powerful Insight custom fields. The custom fields are configured to visualise a subset or the whole asset structure directly on the JIRA issue making it possible to report issues on your assets.

Advanced Graphs and Sophisticated Reporting

Insight ships with an advanced graphical framework that visualises dependencies between assets as well as asset types. You can also access the advanced reports and powerful dashboard gadgets.

Looking for all servers running version 7 of JAVA? Want to know your virtualisation percentage?

Rest assured that the Insight reports will get you all the answers you need to make the right decisions.
